PATEX is a research company providing the intellectual property community with professional patent search services, operating under the PATSCAN trademark. PATEX president Ron Simmer is a professional librarian and researcher with 25 years of online searching experience in the fields of engineering, science and intellectual property.

To start off the New Year, the traditional PATSCAN calendar of bizarre patents presents some of the world's most interesting inventions, celebrating the human creativity that began when the first hominids banged rocks together to make tools.

From the Stone Age to the Nuclear Age, some of the greatest advances in technology were weapons of war; possibly in this millennium we may see sustainable technologies turned towards the survival of the planet and the human race.

Successful technologies are rare: even scientists in the great research corporations base a small percentage of successful inventions on a large number of failures. Often the most profitable inventions were accidents, such as "Post-It" notes.

I salute the inventors of the world who have had the courage to hitch their wagon to a star.

PATEX and PATSCAN are registered Canadian trademarks, held by PATEX Research and Consulting Ltd.

Robert L. Smelton, Twentynine Palms, CA

Dec. 9, 1963

As physicians and dentists well know, it is important to prevent fear of injection by hypodermic syringes on the part of children. Preventing such fear or apprehension will elevate the standards and quality of work of the medical and dental fields, thereby improving the overall health standards of our nation. My invention involves redesigning a hypodermic syringe by forming the casing or barrel of the syringe into the shape and appearance of an attractive object or animal pleasing to children.

"Its all fun and games until you lose an eye." -Old Canadian saying

Helene A. Shelby, Oakland CA.

Aug. 19, 1927

The primary object of my invention is the provision of an apparatus for the creation of illusory effects calculated to impress the culprit with their being of a supernatural character and to so work upon his imagination as to enable an inquisitor operating in conjunction with the recording system to obtain confessions and graphically record them...

George M. Troutman Jenks, St. Petersburg, FLA.

Jan. 28, 1949

In order to teach an ideal golf swing by restricting the movements of a golfer's body, I have found that it is necessary to treat the whole body as a unit... an object of this invention is to provide a golf practice apparatus for holding various parts of a golfer's body in definitely spaced relationship during successive stages of the golf swing...

"A common mistake that people make when trying to design something completely fool-proof is to underestimate the ingenuity of complete fools."

US269766

James A. Williams, Freedonia, TX.

Aug. 21, 1882

My invention relates to an improvement in animal traps consisting of a frame upon which a revolver is secured, a treadle, spring and levers by which the firearm is discharged when the animal steps on it. This invention may also be used in a door or window so as to kill any person or thing opening the door or window.

Hugh B. Cunningham, Arnot, PA.

Sept. 7 1909

The primary object of this invention is an improved construction of device for use by mothers with nursing infants designed particularly to avoid unpleasant and embarrassing situations in public places by the necessary exposure of the breast in suckling the child. The invention consists essentially in a nursing attachment arranged for the detachable connection thereof of the nipple on a tube of any desired length...

This invention relates to life saving apparatus and its object is to provide means whereby the life of a person dropping from an aeroplane or airship either over land or water, may be saved. I attain my object by means of an outfit consisting of a life jacket, lined with air tight inflatable cushions, a spring helmet attached to the jacket, and a parachute fastened to the body adapted to be opened and shut at the will of the wearer.

The object of this invention is to provide a device of this character in the form of a hood adapted to fit around the edges of the tub. A further object is to so construct this hood that a seat carried thereby and upon which the bather sits, permits the maintenance of a perfect joint between the edges of the tub and hood and thereby prevents displacements of the hood

Ludwig Ederer, Omaha, NB
May 13, 1899

This invention has relation to an improvement in alarm-beds. The object of my invention is to provide a bed to be used more particularly in connection with hothouses and conservatories and is arranged in such a manner that should the steam in the heating pipes fall below a certain pressure it will tilt the bed to awaken the sleeper in charge of the heating plant.

Apparatus for facilitating the birth of a child by centrifugal force

2010
PATSCAN

It is known that due to natural anatomical conditions, the fetus needs the application of considerable propelling force to enable it to push aside the constricting vaginal wall and overcome the friction of the uteral and vaginal surfaces...It is the primary purpose the present invention to provide an apparatus which will assist the under equipped modern woman by creating a gentle, evenly distributed properly directed, precision-controlled force that acts in unison with her own efforts. In accordance with the invention there is provided a rotatable apparatus capable of subjecting the mother and fetus to a centrifugal force directed to assist and supplement the efforts of the mother in overcoming resisting forces to deliver the child into a net bag.
